Custom Carts & Racks

Delivering protected and maximized payloads.

Many long-term studies have found the longevity and versatility of fabricated racks and carts to be more cost effective than wooden skids or one way throw away containers made of various materials.

When creating your custom solution we consider:

Payload Maximization

- Creative stacking of parts
- Knock down or fold down for lower return cost
- Multiple use racks that work for various parts
- Nesting of parts for rack or cart maximization

Safe Transport and Storage of Product

- Cushioning of parts while being held firmly in place
- Painted surfaces protected by holding on non-critical surfaces
- No loose parts or parts that can become loose during the shipping process
- Built to withstand brutal handling during the transporting process
- Heavy duty construction – stacking if required
- Light weight designs, yet strong and durable
- Flip up shelves for multiple tiered storage that allows for ease of loading and unloading

We offer a free container study and shipping analysis for your return on investment. Please send us your 3-D model for a free shipping analysis and quote.

Custom In Process Carts & Racks

Safe, protected, and efficient in-process handling.

Well designed in-process carts will re-position and protect your payload. In-process carts can minimize fork lift traffic and floor space requirements.

Carts are used everywhere in material handling. Plymouth Industries, Inc. prides itself in developing the perfect, custom-made solution to move items from Point A to B in very specific ways and with very precise considerations.

- Barrel carts/racks
- Push carts/racks
- Techline carts/racks
- Custom carts/racks
